Bengaluru,India

Software Development Engineer - I (SDE)

About Us

Licious, operated by Delightful Gourmet Pvt. Ltd is India's leading gourmet meat brand. Headquartered in Bangalore. Licious was launched in **September 2015 by Abhay Hanjura and Vivek Gupta** who sensed a huge business opportunity in offering prime quality meat products that were otherwise dominated by the unhygienic and unreliable wet market followed by frozen meat options which is an unpopular workaround for Indian consumers.

Licious follows an end-to-end business based on the hub and spoke model that starts from procuring the fresh produce to processing, storage, and delivery.

Through this entire supply chain, the freshness and nutritional content of the meat are strictly maintained till the delivery at the doorstep of the consumer. Licious was started with the aim of satisfying customers with world-class meat, fish, seafood, and meat-based products. Powered by technology, Licious delivers within 120 minutes of ordering through either the web site or the Licious app.

Why Join Licious

Executive Leaders & founding team from companies like Uber, Nestle, Snapdeal, Starbucks , Amazon, are helping us Induct some of the **industry's best people practices.** hence initiatives from such world renowned leaders are helping in continuous learning and improving our overall culture of the organization.

- You will have all the **flexibility** in the way you want to work.
- You will have **freedom** of choosing the **technology stack.**
- You get to add real value to the company by solving most impactful **customers problems** through technology interventions(first hand) .

Join us in **building first D2C Unicorn of India.**

About the role -

With the help of AI/ ML, We are building the Ultra Hybrid Engineering Ecosystem at Licious. We are looking for engineers who can work in such dynamic environments with hyper growth mindset.

Responsibilities of the Role

- Your everyday responsibility will be to **write clean code** that is readable, maintainable, secure and Bug-free
- You are a **Problem Solver,** you believe that the best solution is not where everyone is already looking.

- Being part of **collaborative teams,** you will be responsible to not only articulate your ideas to your internal teams but also some times to other key stakeholders

- You will either be writing new **algorithms** or have a strong understanding of using/improvising the existing ones for the right problems.

An Ideal Candidate should have

- Should be strong in **complex problem solving, Data Structure & Algorithms.**

- It will be good to see if you have participated in **community coding** activities like Top Coders, Github, and have participated in community competitions.

- Should be proficient in one of **Programming language**s i.e Java, Node, Golang, etc. and related frameworks. Knowledge of multiple languages is a plus.

- Comfortable with one of **SQL or NOSQL databases.**
- Knowledge on **AWS deployments** is a plus.

Not only that, we generate huge employment in rural area by **generating employment amongst our farmers** through our "farm to folk" model and directly help farmers improve their livelihood.

Along with solving some of the critical end consumer problems using cutting edge technologies, you get to join the larger cause.

Journey So far

Started Licious in 2015
Abhay(Entrepreneur 35 Under 35)
Vivek (Fortune - 40 Under 40)

Currently at **$300 Million** Valuation , with **$100** Ingested by Angels & Top VC's
