DEXTERIO
PREFAB INTERIORS

Role: Product Manager

Location: Jaipur, Rajasthan & Gurgaon, Haryana
Offered CTC: Rs. 690,000 - Rs. 870,000
ESOPS: (0.1% - 0.3%)

About Dexterio:

We're building India's # 1 community of Interior designers, architects, design enthusiasts and millions of homeowners.

Dexterio is a community first marketplace for home renovation and Interior design services, providing end to end solutions to its customers. For Professionals, Dexterio provides a one-stop marketing and business management solution that empowers them to stand out, get more clients and manage their projects in a more efficient and profitable way.

Dexterio is at the helm of the home interiors transformation. We use tech to scale the jobs of interior designers and to ease the lives of homeowners and service partners. We are a design and technology-first start-up and employ a combination of data science, algorithms, and design to create unique experiences for homeowners and scale the job of interior designers.

About the team :

Product Management in Dexterio closely resembles our rapacious growth. Because we obsess over understanding customer behaviour, Our business growth is testimony to a singular focus on how we think of 'products' for our unique customers. 😉

But there's more – we love to have fun as much as we love to work hard. From movie buffs to sportspersons, we have a super cool team. So if a game of badminton after a day of brainstorming at work sounds like something you would love to do, then join us!

About the role :

In this role, you will not only get to flex your skills but also learn to thrive in a fast-paced start-up environment with a high degree of autonomy. This cross-functional leadership position requires you to work closely with the Engineering, Design, Category Management, Marketing, and Finance teams to bring new products to life.

Key responsibilities include:

● Manage the entire product lifecycle, starting at strategic planning and OKRs, all the way to managing backlog and agile iterations

● Identify, conceptualize and develop new products and any amendments/improvements to existing products.

● Analyse data (scientifically) and market trends, and identify solutions to support product development

● Develop, lead and implement projects such as company-wide go-to-market plans

● Ensuring timely delivery of projects in collaboration with other departments

● Work collaboratively with internal and external teams, including program/project management, troubleshooting and alignment

● Manage stakeholders and communicate effectively with them - on strategy, features, OKRs and releases; and acting as the "go-to" person for any enquiries/suggestions/feedback

● Liaise with cross-functional teams - offering support and sharing knowledge in order to maximise cooperation and alignment

● Collaborate with Engineers, Product Managers, Designers and other colleagues - sharing knowledge on product developments and issues to discuss and implement effective solutions for the team

● Collaborate with the Developers to agree on priorities and ensure product developments/amendments are prioritised correctly and as per the business needs

● Identify any issues within current working practices that might impact product delivery

● Liaise with colleagues effectively to resolve any faults with product delivery

● Identify barriers that potentially impact product availability and work efficiently to resolve issues and ensure products remain competitive and effective

Preferred Qualifications :

• Knowledge of the internet and multiple functional areas, such as Product Management Operations, Engineering, UX/UI, Sales, Customer Support, or Marketing.
• Good grasp of how cloud-native web applications are architected for scale and performance.
• Understanding of platforms, digital media, and web/social media management and measurement tools (e.g. Adsense, Google Analytics), Social Media ads, algorithms and analytics and SEO
• Strong storytelling skills that can keep large audiences engaged.
• A bachelor’s degree with at least 2 years of experience in Technology Consulting/ Entrepreneurship/ Product/ Software Development
