Strategic Cloud Engineer, Data, Google Cloud Professional Services
Bangalore, Gurgaon, Hyderabad or Mumbai

Company overview:

Google is not a conventional company, and we don't intend to become one. True, we share attributes with the world's most successful organizations – a focus on innovation and smart business practices comes to mind – but even as we continue to grow, we're committed to retaining a small-company feel. At Google, we know that every employee has something important to say, and that every employee is integral to our success. We provide individually-tailored compensation packages that can be comprised of competitive salary, bonus, and equity components, along with the opportunity to earn further financial bonuses and rewards. Googlers thrive in small, focused teams and high-energy environments, believe in the ability of technology to change the world, and are as passionate about their lives as they are about their work. The Area: Google Cloud

The Google Cloud Platform team helps customers transform and evolve their business through the use of Google's global network, web-scale data centers and software infrastructure. As part of an entrepreneurial team in this rapidly growing business, you will help shape the future of businesses of all sizes using technology to connect with customers, employees and partners.

The role:

As a Strategic Cloud Engineer you will guide customers to Architect, design and deploy their applications on Google Cloud infrastructure that includes identity and access management, network architecture, application security. You will also help them design their cloud applications for large-scale data processing systems, optimal scaling, develop data pipelines optimized for scaling, and help in debugging potential platform issues. You will travel to customer sites to deploy solutions and deliver workshops to educate and empower customers.

Responsibilities:

- Be a trusted technical advisor to customers and solve complex Cloud Infrastructure and Data challenges.
- Create and deliver best practices recommendations, tutorials, blog articles, sample code, and technical presentations adapting to different levels of key business and technical stakeholders.

- Travel regularly (up to 30%, although we also frequently use video conferencing) in-region for meetings, technical reviews, and onsite delivery activities

Minimum qualifications:

- BA/BS degree in Computer Science, Mathematics or related technical field, or equivalent software engineering experience.
- Hands-on experience in maintaining internet facing production-grade applications in virtualized environments.
- Experience in writing scripts in one or more languages such as Python, Go, or similar.
- Experience managing internal or client-facing projects to completion

Preferred qualifications:

- Experience with any of Infrastructure , Networking or BigData.
- Identity management experience (Okta, Ping, Centrify, GCDS, Active Directory, etc.),
- Basic Cloud Foundations including networking, logging and monitoring, security, and compliance.
- Experience in working with/on data warehouses, including data warehouse technical architectures, infrastructure components, ETL/ ELT and reporting/analytic tools and environments, data structures.
- Hands-on experience in big data, information retrieval, data mining or machine learning and experiences in building multi-tier high availability applications with modern web technologies (such as NoSQL, MongoDB, SparkML, Tensorflow).
- Experience in system administration tasks in Linux, Unix, or Windows with familiarity with standard IT security practices (such as encryption, certificates, key management).
