McKinsey Client Capabilities Network (CCN)

Title: Analyst - Asia Regional Research Team

Location: Chennai

McKinsey Client Capabilities Network

Our Client Capabilities professionals work alongside our consultants across the globe to deliver Change that Matters to our clients. They support our consultant teams, both remotely and at client sites, in an agile and targeted way. Further, they are core to our firm's R&D, developing new knowledge and building and refining proprietary capabilities (e.g., assets, data sets), as well as curating, managing, and maintaining them. Our portfolio includes state-of-the-art research, asset-backed and rapid diagnostics, benchmarking, and workflow support. Our professionals have deep expertise and are able to apply a broad range of methodologies for specialized on-demand analyses.

Our Client Capabilities Network is an exceptional place to have a rewarding career. Around the globe, our talented colleagues build and deploy distinctive intellectual property (IP), tech- and data-enabled assets, and leading expertise alongside or as an integral part of our client teams—helping leading businesses, governments, and institutions.

We are looking for people with diverse educational and professional backgrounds —people who can help build the firm's capabilities and create positive and enduring change through improving the communities in which we work and live. Who you'll work with:

You will work in our Chennai Client Capability Center, as part of the geographic research team.

You will be a part of our Global Client Capability Network (CCN), which includes more than 3,000 Client Capability professionals who work alongside our consultants and clients to generate distinctive insights and proprietary knowledge. You will also help develop, codify, sanitize, and manage our global knowledge portal, which includes more than 50,000 documents that form the backbone of our firm's knowledge management.

What you'll do:

You will leverage a solid understanding of business trends, issues, and concepts to efficiently respond to complex research questions by delivering synthesized, actionable facts and insights to our consulting teams and clients.

As an Analyst, you will work with consultants and fellow analysts to understand, disaggregate, and prioritise their information needs. You will help the McKinsey client service teams determine the most appropriate solution to the issues they are working on, delivering cutting-edge insights and expertise, deploying existing capabilities and incubating new solutions.

Your day-to-day tasks may include identifying the key issues for the problem at hand and determining the most appropriate solution while effectively balancing quality, availability, timeliness, and cost factors. You're likely perform a variety of analyses such as benchmarking, trend identification, industry profiling, market sizing, growth projections, opportunity scanning, etc., in order to add value to problem-solving discussions, and you'll provide synthesis, insight and client implications within tight deadlines via end products in the form of PowerPoint charts, written memos, models and framework. In time, you will also

participate in, and eventually lead, internal knowledge development and capability-building initiatives for the team.

You will also have the opportunity to collaborate with colleagues within the Client Capability centres globally on larger client projects and internal knowledge initiatives.

You will also coach and nurture junior colleagues to enable them to deliver distinctive client impact and work on day-to-day team operations.

Qualifications:
