Associate Interaction Designer, Quicksand

Job Purpose and Description

Increasingly, Quicksand's body of work entails researching, designing and developing digital solutions across a variety of platforms including mobile devices, browsers, desktop apps, tablets and other digital assistants. We have also been working with emerging technologies like augmented and virtual reality, gestural interfaces and gaming platforms. While we recognize that the applications and formats in the world of technology are expanding by the day, we are looking for individuals who bring a strong foundational understanding and skills in the area of user experience and user interface design.

It is expected that the individual will bring skills that span the various steps starting from information architecting, wireframing, front-end prototyping and detailed interface design. While the dominant applications for the studio are still in the realm of websites, browser apps and mobile apps (and therefore we are expecting a strong portfolio in these domains), we expect that a foundational understanding of user experience and human-computer interaction is translatable to any new digital interface and we expect the candidate to be willing to experiment and tinker with new applications.

Technological interventions are an ever-increasing interest and mandate from our clients and for internal projects, and this role will be a leading voice in assisting the studio in exploring and developing innovative solutions to challenges in both the corporate and social impact contexts.

Some specific responsibilities of this role are:

Research & Concept Development

- Gather and evaluate user requirements in collaboration with project managers, design researchers and end-users
- Translate user insights into feature level specifications for the concerned digital solution
- Illustrate design ideas using storyboards, interaction flows, sitemaps
- Identify and troubleshoot UX problems in an iterative process

UX Design

- Wireframe concepts (including interactive prototypes) using a variety of tools and softwares (Sketch, Proto.io, Principle, Invision, Adobe XD, click-through Keynote)
- Code for web and/or mobile app experience (JavaScript/CSS/HTML, Objective-C, etc.)
- Design detailed and elegant interfaces for web, mobile and other platforms based on core UX principles (and therefore fluency in XD, Sketch, Photoshop)
- Conduct layout adjustments based on user feedback, oftentimes gathered in-context

Documentation & Collaboration

- Develop comprehensive documentation for the final solution including user experience insights, design principles, style standards on fonts, colors and images
- Prepare and present rough drafts of their solution concepts to internal teams and key stakeholders
- Ability to work closely with front-end and back-end developers and engineers to bring the digital solution to life

Independent R&D

- Researching, evaluating, and informing colleagues and other stakeholders about UX/UI trends and strategies
- Tinkering with new technologies and steering studio's experiments in these domains
- Steer thought leadership for the studio in the wider field of interaction design

Qualifications

Successful candidates will champion the field of interaction design within the studio and lead the translation of a deep user understanding into relevant and seamless digital solutions. Some specific qualifications you would need to have are:

- A Bachelor's or Master's degree in Interaction Design, New Media Design, Engineering (Computer Science) or related fields from a leading program in India or abroad
- 1-3 years of professional work experience as a UI/UX/Interaction Designer or

similar role
- Extensive portfolio of digital design projects demonstrating specialisation and a passion for this field
- Avid technology enthusiast and tinkerer
- Knowledge of wireframe tools (e.g. Wireframe.cc and InVision)
- Familiarity with HTML, JavaScript, and CSS design capabilities
- High level of skill using design software like Sketch, InVision, InDesign, Photoshop, Illustrator, Webflow, Proto.io, etc
- Fluency in responsive design, mobile/tablet UI UX
- Excellent written and oral communication skills in English. Knowledge of any other languages (including Hindi) would be a definite plus but not mandatory
- Ability to think critically and have exceptional attention to detail
- Some evidence of independent creative work would be viewed very positively
- A roll-up-your-sleeves attitude towards your work

Location

The position will be based in Delhi, India with frequent, project related travel to other studio locations. It will also involve a chance to meet and work with consumers across the spectrum for projects, as well as travel to workshops, client meetings and the occasional company offsite!

Compensation

A compensation package commensurate with your skills and experience will be designed for you.

If all this sounds up your alley, please put together a document that highlights the following:

- Tell us about yourself and why you see yourself as a fit for this role?
- What specifically draws you to apply at Quicksand?
- Upload your resume/ portfolio / any other links that give us a window into who you are and what your interests are?
