Hiring Technopreneurs

Please apply at this link: https://forms.gle/oJzeVXRMyLTzsuWL7

If you have the urge to build a successful internet business and want to learn the ropes before taking a deep dive on your own, keep reading!

We have built one of the most successful yoga platforms on the planet with a loyal customer base across the globe. We know what it takes to do it but more importantly, we are willing to share our knowledge with you, hands-on.

Whether you are a fresh graduate or an experienced technology professional, we provide to you a unique opportunity to own and execute product and feature development for our yoga platform - with our support.

What will you learn

1. **How to create Products that the customers love**

Learn the art and science of conceptualizing, designing, developing, deploying and commercializing a SaaS platform

2. **Customer engagement**

We live for our customers. We design everything for our customers. We do not do anything that our customers do not need. We do everything with customers in mind, so we listen to our customers very carefully. We deploy solutions that solve their problems and we actively seek feedback on whether we meet and exceed their expectations.

Well! You get the drift!!!

And yes! Getting a 5/5 review from our long standing customers on facebook, takes some effort!

3. **Develop high performance web applications that wow the customers**

You will gain tremendous insights into leveraging latest and not so latest technologies to develop solutions that are lightning fast; solutions that are highly responsive and just do not fail.

4. **Highly scalable solutions**

We leverage microservices architecture, high performance no-sql databases and whatever else it takes to build a solution that is highly scalable and works all the time for our customers worldwide.

You will get a chance to participate in our conversations on the best way to design and segment applications and services for them to work cohesively while delivering high performance to our customers.

5. **Full stack experience**

You will learn the backend, frontend and everything in between. You will know performance and technology issues across browsers and devices.

We use Google App Engine for web infrastructure (well, we use AWS too!), Python for backend, jinja2 for dynamic html, CSS, JS, jQuery, Bootstrap for front end.

Flexible Working Environment

1. **Remote working model**

We follow a remote work model. Our team members can work from anywhere in India. You are expected to work 8 hours a day but you choose your timings.

2. **Team collaboration**

We are looking to hire star players who can stand on their own feet. At the same time, we strongly believe that building and scaling an organization is a team sport - and same as our customer focus, we cannot emphasize enough on this ethos.

We expect you to learn from your colleagues and we want you to contribute to team learning. For this, we have regular virtual meets between team members for design and code reviews, to discuss software engineering process improvements, to learn specific topics from each other and a weekly round up of the progress made for our customers - well! No discussion is complete at tummee without our customers in focus.

Competitive compensation and benefits

Compensation: We offer market competitive compensation.
Bonus: Paid based on your and company performance.

Based on the current income tax laws in India, our compensation structure (paid as a committed contractual fee) is far more tax efficient compared to typical salary structure in organizations.

Paid leave: 15 days of paid time off
Public holidays: 10 days
Sick Leave: 5 days

Communication expenses: Broadband and mobile expenses covered on actuals for all the full time hires.

Contractual model of hiring

Please note that we have a global, remote operations model where:

1. Every team member works remotely (In India and other countries)
2. We do not have a legal entity registered in India and every one works under contract directly with the company registered in the United States
3. The contract is a long term, perpetual contract (with no end dates or fixed period)
4. Like a job offer, the compensation is paid monthly along with all the benefits such a paid leave, bonus etc.

Our selection process

We look for people who are self-starters, who are able to work independently while collaborating with the team to solve difficult problems, comprehensively. We will be there all the way to provide support where needed but expect you to be an explorer.

The following skills will go a long way in ensuring your success at our fast-paced environment:

Personal traits:

1. **Integrity**: We need our team members to have a very high level of integrity. We trust our team members - fully. To work from home, at your own time. To keep the trust, we need you to have 100% dedication to the work in your area of responsibility. Side projects, moonlighting, less than required time and effort etc. becomes quite apparent even in remote environments and will not work.
2. **Hard work and Persistence**: Entrepreneurial journey is tough. It needs a lot of slog and goes way beyond your comfort zone. You should be willing to put in the effort and time over a long period of time to deliver well and succeed with your projects.
3. **Independence**: All of us work remotely. While other team members are available to help, you need to be able to do a lot of work independently without prodding from a lead or manager.
4. **Results orientation**: You will need to have a positive, can-do attitude with a desire to meet and exceed commitments, consistently. You should have the habit of measuring yourself by delivering tangible results for your customers.
5. **Detail orientation**: All successful products are built with painstaking attention to detail. To do well for yourself and for your customers, you should be willing to put in the effort in understanding and thinking through all the details right from technical architecture to user interfaces to deliver the ultimate user experience.
6. **Passion for excellence**: You must be driven to achieve excellence in whatever you undertake. If you have this passion, you will draw upon all the above traits to build best-in-class products.

Aptitude and functional skills:

1. **Analytical skills**: You will be working on problems and solutions that need solutions tailored to our customer needs. Cookie cutter solutions do not work. You will need to learn from other benchmark solutions in the industry, but will need the ability to synthesize information and then develop solutions specific to our needs.

2. **Communication skills**: While working in a remote environment provides a lot of flexibility, there is an increased requirement for good communication so that you can share your ideas, your challenges, potential solutions succinctly and effectively with other members of the team.
3. **Technical skills**: Technology is a tool for us to deliver value to our customers. A deep understanding of technology to solve customer problems is important. You should have the zeal to learn these not for the sake of adding latest tech tools to your resume but to figure out what is needed and why and how to meet a customer's needs in the quickest and most reliable manner.

   Must have skills:
   a. Experience with any of the following programming languages - Python (Preferred), C++, Java.
   b. Experience with SQL/NoSQL databases.
   c. Good understanding and experience of building scalable web applications.

   Good to have skills:
   1. Knowledge about software development principles and patterns.
   2. Experience with web-frameworks such as Webapp2, Django and Flask.
   3. Experience with jQuery, react.js, HTML, CSS and Javascript.
   4. Experience with Google Cloud Platform, specifically Google App Engine.
   5. Understanding of the internals of git version control.

Academic credentials:

1. You should have a Bachelor's or Master's degree in Computer Science or a related engineering discipline.
2. For Fresh graduates and students currently in final year: 7 and above CGPA (till latest semester) including no active backlogs. 90% or above in 10th and 85% or above in 12th (CBSE). For other state boards 90 percentile and above.
4. For experienced candidates: Above average academic credentials and evidence of excellence in past work experience.

Seems like a lot? Well, we never said Entrepreneurship is an easy journey!!!

Apply if you want to get on the ride!
