- Experience in translating analysis results into business recommendations
- Working experience with BI tools (Power BI, Tableau, Metabase, Qlikview, Datastudio

About the job:

DS Analysts provide quantitative analysis, market expertise and a strategic perspective to our teams throughout the organisation

As a data-loving member of the team, you can see different angles of a product or business opportunity, and you know how to connect the dots and interact with people in various roles and functions. You will work to effectively turn business questions into data analysis, and provide meaningful recommendations for making better decisions

You will weave stories with meaningful insight from data. You'll work closely with product leadership and help in product Discovery and product Delivery

Responsibilities:

- Collaborate with cross-functional stakeholders to formulate and complete full cycle analysis that includes data gathering, analysis, ongoing scaled deliverables, and presentations
- Work on DS related projects with Product team, solving for business priorities

- Work with the leadership, Product, and Engineering teams to define short and long-term success goals for product efforts and Help with Product discovery and white space analysis
- Develop an understanding of data structures and goals, advocating for changes where needed to focus on key decisions to improve products and services
- Build tools to help scale and support the launch evaluation for 1DS products. Build and prototype analysis pipelines for scalable insights
- Comfortable with developing models, coding and writing relevant scripts in Python
- Conduct primary and secondary research - industry & competitive analysis, market penetration models, customer surveys etc

We Strongly Value

- Growth mindset, empathy and strong work ownership in taking things to completion
- Good business acumen with the ability to synthesise a lot of information quickly, highlight the key takeaways, and disseminate actionable insights
- Ability to translate structured and unstructured problems into the analytical framework, experience in scripting with SQL, extracting large sets of data, and design of ETL flows
- Ability to experiment with alternate analytical techniques to solve a problem
- Interest and aptitude in data, metrics, analysis, trends and design & storytelling
- Proactive with strong organisational skills & the ability to prioritise and work on projects with great efficiency & attention to the details
- Exceptional written and verbal communication skills
- Prior experience in analytics, Product or consulting (preferably client facing) would be an advantage
- Experience with e-commerce, retail, CPG or marketing analytics would be an advantage
