Blume Ventures | Portfolio Data Analyst

ABOUT US

Blume Ventures (www.blume.vc) is one of India's leading early-stage Venture Capital firms. We invest quite early on in a startup's journey and walk alongside them as they grow from "Unknowns to Unicorns". Our investment approach is a balance between data-driven, research-backed decisions based on industry trends, and drawing from our collective years of experience as investors, operators, ex-entrepreneurs and domain experts. We believe in the power of technology, and invest in companies that have the potential to solve big problems at scale in sectors such as deeptech, fintech, healthcare, edtech, mobility, consumer and lifestyle, among others. Some of our marquee investments include Unacademy, Spinny, Grey Orange Robotics, Purplle, ElectricPe, Dunzo, HealthifyMe, Classplus, Ultrahuman, Pixxel, and CarbonClean.

We have recently closed our flagship fund IV, our biggest ever, to back the next wave of revolutionary founders and ventures. We are seeing bigger dreams, and bigger ambitions in these new founders, in larger numbers than ever before. They are targeting bigger problems and bigger opportunities, inspired and motivated by the first wave of success stories that are unfolding more rapidly now out of the Indian startup ecosystem. We wholeheartedly believe that the Venture Capital business is - first and foremost - a people's business. We choose to invest in our people with equal focus, knowing that an exceptional team is critical to our success.

THE ROLE

We're hiring a **DATA ANALYST** to support us on capturing, tracking and analysing data from our Portfolio Companies. This data is critical for us to make further follow-on investment and fundraising decisions, and is also a key component of our investor marketing and reporting activities.

This is a great entry point into Venture Capital for someone who is keen to learn more about how we look at successful startups and support their growth. The work will provide high learning opportunities into understanding operational metrics and give you an opportunity to share insights, trends and an overall view of our fund performance.

This is a great role for you if:

YOU HAVE

- 1-2 years of experience with financial/data analysis
- Experience and expertise in generating dashboards, reports, templates and presentations
- Comfort and familiarity with database management systems
- A passion for data mining and interpretation and ability to deduce and present business case and health from operating and financial data
- Incredibly high attention to detail and the ability to work under tight timelines
- Strong stakeholder relationship skills and the ability to manage data requests across a large team

YOU ARE:

- Excited at the prospect of working to support portfolio growth at a VC fund
- Ready to put in the time and effort required to meet organizational goals - this may require long hours and weekend work, and we always work from a trust-first approach so that we do whatever it takes to get the job done, and then have sufficient time off as required as well.
- At heart, a catalyst - someone who wants to use all of their skills to help Blume's startups succeed and grow
- Comfortable with the idea of working in an Apprenticeship model - with lots of mentorship, feedback and guidance but significant individual responsibility and freedom
- An inherent hustler, focusing on 'closing the deal' and doing whatever it takes

- Looking for the opportunity to work in a fast-growing company that is committed to providing support, growth and professional development as part of everyday work
- Not limited by a job description and designation, and open to the unique opportunity of working across functions at India's leading early-stage VC fund and charting your own learning journey
- Eager to work with some of the best minds in Indian VC and build a career, limited only by your own aspirations

The role will be based out of our Mumbai office and will be a 2-year opportunity, with the possibility of extending this and expanding the scope of the role for the right individual who would like to continue and grow their career with us. The role will work with our Growth Investments, Capital Networks (Fundraising) and Investor Relations teams who are based out of Mumbai.
