Job Title:	Full Stack Developer	**Designation:**	SDE 1 – Full Stack Engineer
Department/Group:	Technology	**Location:**	Pune
Level/Salary Range:	Up to Rs. 6 LPA.	**Position Type:**	Full Time

Job Description

We are looking for a Full Stack Developer responsible for managing the interchange of data between the server and the users. Your primary focus will be the development of all server-side logic, ensuring high performance and responsiveness to requests from the front end.

At EaseBuzz, every individual is honed to be a leader and enjoys the freedom to make decisions that she/he sees fit to steer the organization closer towards its goals. We work in small, decentralized teams that promote independent authority and freedom to approach and solve problems creatively. This path nurtures the artisan in every individual and brings to fruition the vision of crafting purpose-built solutions for clients.

Qualifications and Education Requirements

- Expert in Python, with knowledge of Python web framework (such as Django, Flask, etc depending on your technology stack)
- Excellent knowledge of programming languages (PHP,Python preferred) along with JavaScript, Jquery, Angular-JS.
- Should be very well versed with database queries like mysql,etc.
- Familiarity with some ORM (Object Relational Mapper) libraries.
- Able to integrate multiple data sources and databases into one system.
- Understanding of the threading limitations of Python, and multi-process architecture.
- Basic understanding of front-end technologies, such as JavaScript, HTML5, and CSS3.
- Understanding of accessibility and security compliance.
- Knowledge of user authentication and authorization between multiple systems, servers, and environments.
- Understanding of fundamental design principles behind a scalable application.
- Understanding of the differences between multiple delivery platforms, such as mobile vs desktop, and optimizing output to match the specific platform.
- Able to create database schemas that represent and support business processes.
- Strong unit test and debugging skills.
- Good communication skills and excellent problem-solving capabilities.

Role and Responsibilities

- Work on complex, custom-designed, scalable, multi-tiered software development projects.
- Design and implementation of low-latency, high-availability, and performance applications.
- Integration of user-facing elements developed by front-end developers with server-side logic.
- Implementation of security and data protection.
- Be responsible for the quality of software and resolving any issues regards the solution.
- Think through hard problems, not limited to technology, and work with a team to realize and implement solutions and Learn something new every day.
