arithmic

Who we are

We at Folium Labs are building state of the art scaling solutions (also called layer 2). Our goal is to make financial technologies scale to billions of users while retaining aspects of privacy, security, and decentralized trustlessness.

We believe this can be achieved using powerful cryptographic tools emerging from the zero knowledge space. We aim to be the first Indian company building scalable and robust zero knowledge based scaling solutions that empower a large part of human society.

AREAS OF **ACTIVE RESEARCH**

Cryptography and Privacy:
zk-proofs, hash functions, pseudo-randomness (Fiat-Shamir)

Algebraic Complexity:
polynomials (univariate, multivariate), arithmetic circuits, probabilistic PIT

Distributed Algorithms:
multi-party computation (models and algorithms)

Data Structures (Merkle Trees):
We would like to experiment with data structures that manage the state of the system.

Programming Language Theory and Compiler Design:
One of our aims is to create a new smart contracting language that is native to our L2 network.

Image Format Research

JOB ROLES

Research scientists
Junior Research scientists
Applied research scientists
Cryptograhpic engineers
Technical writers

Why you should work with us

We at Folium Labs love to work with inquisitive and motivated people.
If you're looking to be part of a team that does cutting edge research and engineers practical solutions from it, Folium Labs is the right place or partner for you.
