Junior Research at Folium Labs

Job Description

As a Junior Research Scientist at Folium Labs you will be expected to read papers, documentation, and specifications. You will be working with the Chief Scientist and other Research Scientists to implement protocols and processes into computer systems.

Objectives of this Role

- Pursuing research directions suggested by Seniors Research Scientists
- Implementing Cryptographic protocols
- Designing protocols to help layer 2 scaling of distributed systems in general.

Skills and Qualifications

- Masters or Bachelors in Mathematics or Computer Science (or Electrical or Electronics)
- Strong Background in Maths especially Linear algebra, and basic Cryptography (IP protocols).
- Ability to read, understand and implement research papers proposing new Crypto protocols.
- Proficiency in Communication (Writing and Presenting) with Designers and Development Team.
- Understanding of the Programming fundamentals
- Proficiency in at least coding language: Preferable Rust
- Excellent work ethic and enthusiasm for applied research

Why you should work with us

We at Folium Labs love to work with inquisitive and motivated people. If you're looking to be part of a team that does cutting edge research and engineers practical solutions from it, Folium Labs is the right place for you.
