arithmic

The foundation for a new fintech future

Job Description

As a Research Scientist at Folium Labs you will be expected to read and write papers, documentation, and specifications. You will be working with the Chief Scientist to chart and execute the direction of research for the organisation. You will be interacting with Junior Research Scientists, development teams, and the management to fulfil your job role.

Objectives of this Role

- Pursue independent directions in determining which existing Zero Knowledge based IOP/IP protocols would aid to improve the technology supporting the scaling of a specific blockchain-based use-case.
- Design new protocols to help improve the existing layer 2 scaling technology. Publish papers in tier 1 conferences and journals.

Skills and Qualifications

- PhD in Theoretical Computer Science related to the following areas (even remotely related is okay):
- Cryptography: ZK protocols for IP or IOP systems, MPC;
- Complexity Theory
- Information Security
- Ability to read and understand research papers with a view to proposing changes to existing protocol.
- Proficiency in Communication (Writing and Presenting) with Designers and Development Team.
- Understanding of the Programming fundamentals
- (Preferable) Proficiency in at least one coding language: Preferably Rust
