PROGRAM MANAGER POSITION

We are hiring a program manager to lead the design, creation, and operations of India's first automated healthcare drone hubs. The drone hub will deliver medical products, vaccines and diagnostics to public healthcare facilities. This highly challenging role will create a long- lasting impact in the region, transforming public health delivery at the last mile.

About the Organization - Redwing

Redwing designs, manufactures, and operates automated drone logistics systems to transform last-mile healthcare supply chains. Our work lies at the intersection of social impact, healthcare, and aviation. Redwing exists to ensure that everyone can access lifesaving medical supplies quickly and affordably. We believe that everyone should have access to quality healthcare irrespective of where they stay.

Established in 2018, we are one of India's fastest-growing automated healthcare logistics enterprises. We work with multiple stakeholders including the Ministry of Health, Ministry of Civil Aviation, several State governments, healthcare enterprises, foundations, and donors.

About the Role

- Position — Program Manager (full-time position)
- Must be eligible to work in India
- Place of Orientation — Bangalore, India
- Place of Posting State or District Headquarters - Arunachal Pradesh or Orissa
- Travel requirements - Extensive travel in India
- Language requirements - English (full proficiency in reading, writing, and speaking); and Hindi (speaking required)
- Experience Required — Minimum 1 years of relevant experience in implementing large-scale complex projects on the ground (preferably in public health, rural development, and last-mile health logistics).
- Qualification Post-graduation necessary; can come from a variety of programs, including Business Administration (MBA), Rural Management, Public Policy, Public Administration, Development Studies, Public Health, Engineering, etc.
- Compensation will be based on skills and experience - INR 9 LPA to INR 15 LPA CTC

Job Description - As the Project Director, you shall:

- Represent the organization and act as a primary focal point to the State and District administration, including Health Department, District Collector, health officials, doctors, paramedics, tribal department, Mandal level Administration.

- Supervise construction of the drone hub by coordinating with contractors, local authorities, state, and district govt, etc.
- Lead hub and field teams, both technical & non-technical to ensure smooth project implementation.
- Hire team members from local colleges and communities and provide overall leadership and mentoring to the drone hub team (10+ people).
- Take ownership of strategic, administrative, and financial aspects of the project.
- Monitor & follow up all activities on the ground and actively take up the issues with the concerned authorities.
- Actively engage with all the stakeholders regularly and take the initiative to solve problems and challenges during project implementation.
- Conduct regular community sensitization activities to promote drone-based delivery services in rural and tribal regions of the districts.
- Engage with donor partners to raise philanthropic funds for the project.
- Coordinate with the team at Redwing headquarters and update progress.
- Ensure the successful case studies from the field are documented and recorded; prepare the field activities' annual report.
- Ensure overall program success; success metrics include the number of flights, adoption of drone services in the public health system, unlocking of newer treatments and procedures in rural public health facilities, etc.

About You

- On Monday, you might meet the State Health Secretary in the Capital, and the very next day, you might have to organize a community sensitization activity in a tribal hamlet. You will be closely working with government agencies, bureaucrats, community, CSRs, donor agencies, investors, local contractors, etc. — so you should be able to work in a highly complex and dynamic work environment.
- The Drone Hubs will be the first of their kind in India — to set it up and get it running requires a lot of planning, coordination, resource management. Hence, you should be an excellent strategic thinker, problem-solver, and be ready to lead the team (10+) from all fronts. The buck stops with you.
- You come across various stakeholders daily. Therefore, you must be fluent in both the languages — English and Hindi. In addition, you must be exceptionally good in drafting press releases, writing reports and overseeing community sensitization programs.
- You must have an excellent grasp of designing training materials, behavioral change communications, and running community engagement programs.
- You have a deep understanding and passion for solving public health challenges, building grass-roots connections, and influencing local experiences.
- You must be ready to embrace disruptive technologies and enjoy working directly with the community.
- You have significant experience working with government stakeholders at central, state and district levels, preferably in the public health and social development space.

- Although you will not be staying in a village, you must be prepared to make your home and work from a district headquarters and have no problem traveling to towns and villages by car, bus, bil‹e, tractor, or boat. Driving experience will be advantageous.
- While there would be holidays and personal leaves available during the project, this is a high-stal‹es role and could mean action during weekends and early and late hours.
- You do not want to jeopardize the project because of a poor joke you cracked with a village chief or picked the wrong words with the District Health Officer. So, you should understand the local sensibilities and cultural context and have the experience of working with the community in the field and with government agencies.
- Not every day shall be sunny and bright — your team might lose off the steam midway, systemic delays might frustrate the tech guys, the externals & local hires might have their differences, the weather may not cooperate — in the end it all comes down to your leadership. Therefore, you have to be highly enthusiastic, optimist but most importantly, pragmatist and always ensure the project is on track.
- Your Emotional Quotient (EQ) must be very high, and you should have lots of patience and be mentally strong to work through pressure cooker situations.

Application Details

Cut-off for applications is March 31st 2023. The interview process may last between 2-4 weeks and involves case and behavioral interviews. Unfortunately, due to the high volume of applications, we will only notify shortlisted candidates.

To apply, please submit your CV/resume and a cover letter.

Kindly send your CV and cover letter in PDF format to anshul@redwinglabs.in with the subject line: Applying for Program Manager role - 'your name'. Both documents are necessary for the shortlisting process.
