VAYANA NETWORK™
Connecting Enterprises

Job Description

The Product

Vayana Network provides a B2B Trade Digitization platform for SMEs and Corporates to collaborate and work with Financial Institutions to raise short term fundings for payables and receivables financing. Vayana Network is thus well placed to help Corporates and their Supply Chains to meet their GST needs. Vayana's role as a GSP and its ability to digitize and reconcile trade data at source enables it to cater to each individual member's GST needs. Our network is PCI compliant and runs 24*7 on the cloud and we are hosted on Amazon AWS. For more details, please visit http://www.vayana.com

Technologies

The platform is built using a polyglot technology stack

- Platform Backend: Python and JVM
- Web Layer: React.js and related ecosystem, HTML, JavaScript, CSS, Bootstrap
- APIs and Services: Kotlin, Python, C# and the related frameworks and libraries
- Client Apps and Customer Integrations: Kotlin, Jersey ReST Framework, home grown optimized HTTP and SQL libraries
- Mobile Apps: Android, iOS
- Database: MySQL
    - JVM – Hibernate and Exposed as ORM library
    - Python – SQLAlchemy as ORM library
- Build Tools: setup tools for Python, Gradle for JVM based apps
- Ops Automation: Ansible, Terraform
- Servers: Ubuntu Linux, Windows Server 2019
- Version Control: GIT
- Test Automation: Python - unittest, pyhamcrest, freshen, nose. JVM – Junit, Kotlin Test
- Cloud Providers: Amazon AWS, Azure, Digital Ocean, Linode

VAYANA NETWORK™
Connecting Enterprises

Requirements

We are a self-organized engineering team with a passion for programming and solving business problems for our customers. We encourage our team to continuously learn new technologies and apply the learnings in the day-to-day work even if the new technologies are not adopted. We strive to continuously improve our DevOps practices and expertise to form a solid backbone for the product, customer relationships and sales teams which enables them to add new customers every week to our supply chain services, financing and GST compliance network.

As an engineering member, you will

- Work collaboratively with product and engineering team to build a targeted solution.
- Work closely with your mentor to understand and detail the problem statement and navigate through various teams from time to time if required for getting further clarity and/or getting your solution reviewed for accuracy.
- Ensure that development processes and deliverables always adhere to the mandates laid down for various certifications (PCI and ISO 27001 in particular)

Skills required

- Pre-requisites: Exposure to any programming language and UI framework
- Knowledge of Java or any of the JVM languages will be an added advantage
- Knowledge of C# or any .NET languages will be an added advantage
- Should be passionate about technology and ready to deep dive into programming
- Should be able to quickly learn Kotlin for backend-oriented problem statement
- Should be able to quickly learn ReactJS+Redux+Typescript for UI oriented problem statement
- Should learn to practice writing testable code and appreciate defect free coding
- Should be able to reason/argue/discuss/suggest solutions and alternatives
- Should be able to decipher the core problem to be solved during discussions with various teams
- Should have good communication skills and experience working in teams
