tummee.com

JOB DESCRIPTION
SOFTWARE DEVELOPMENT ENGINEER

About Tummee:
Tummee.com started with the simple realization that yoga has the potential to nourish and transform individuals, and in turn, societies. Yoga teachers play a critical role in this transformation. We believe that yoga teachers can have a greater impact if they have access to the right tools and resources. Tummee's mission is to provide yoga teachers around the world with the right tools so that they can plan and teach effective yoga classes.

In this endeavor to help yoga teachers, we have built a sophisticated yoga platform that allows yoga teachers to plan their lessons efficiently. The platform also acts as a knowledge repository for yoga teachers by providing them access to an extensive library of yoga poses and sequences. We are continuously evolving our product to better serve the needs of yoga teachers and we would love to have you as a partner in this mission!

What you will be doing:
Work with the founders and software team to:

1. Develop new features and enhance existing product.
2. Analyze feedback and improve upon features under development.
3. Test your work for zero defect deployment.
4. Design for performance and scalability.
5. Participate in software engineering discussions to implement as well as improve development processes.
6. Ensure customer delight.
7. Learn new technologies.
8. And above all, have fun!

Requirements:
If you want to build a world class product over a long horizon and see the large scale, positive results of your creativity and efforts, this is an opportunity for you.

The following skills will go a long way in ensuring your success at our fast-paced environment:

1. Strong analytical skills.
2. Good communication skills.
3. Experience with any of the following programming languages - Python (Preferred), C++, Java.
4. Experience with SQL/NoSQL databases.
5. Good understanding and experience of building scalable web applications.
6. For Fresh graduates and students currently in final year: 7 and above CGPA (till latest semester) including no active backlogs. 90% or above in 10th and 85% or above in 12th (CBSE). For other state boards 90 percentile and above.
7. For experienced candidates: Above average academic credentials and evidence of excellence in past work experience.

8. A positive, can-do attitude with a desire to meet and exceed commitments, consistently.

Good to have:

1. Knowledge about software development principles and patterns.
2. Experience with web-frameworks such as Webapp2, Django and Flask.
3. Experience with jQuery, react.js, HTML, CSS and Javascript.
4. Experience with Google Cloud Platform, specifically Google App Engine.
5. Understanding of the internals of git version control.

What we offer:

1. An established start-up with a worldwide customer base and an industry leading position in the market.
2. Industry standard compensation.
3. Flexible working environment (work from home, at your own working hours).
4. Tax efficient engagement structure (**full time fixed fee contract with leave benefits compared to a job offer with salary**).
5. Opportunity to own and lead design and development of product features with direct customer impact.

Location: Remote
