amuselabs

Site Reliability Engineer: Job Description

About Amuse Labs

Amuse Labs is a growing startup based out of Bangalore and San Francisco, and is the leading online provider of smart games such as crossword and sudoku puzzles. It was born out of a collaboration between the computer science and journalism departments at Stanford University, and counts as its customers some of the leading news publishers of the world, such as The Washington Post, The New Yorker, The Atlantic, The Los Angeles Times, Vox.com and others. We serve tens of millions of games every month.

We are based out of a WeWork office in Bangalore. Salary will be comparable to that of MNC product companies and commensurate with experience. We are a small, world-class and tightly-knit team of about 25 people and looking to grow quickly, but selectively.

Basic requirements

A Ph.D., master's or bachelor's degree in CS, IT or an allied discipline is required for all positions (advanced degrees from reputed institutions are preferred). You must be comfortable with software development in a Unix environment, and must be a good team player. Please be prepared to provide references from reliable people (any recommendations on your LinkedIn profile may also help pass screening.)

Before you apply, please go through our website to know more about our products. If you are shortlisted, please expect at least 5 or 6 intensive technical interviews, spanning at least a day.

Site Reliability Engineer for PuzzleMe

About the Role: You will assume significant responsibility of the cloud infrastructure, monitoring, maintenance, logging and performance of the highly available PuzzleMe™ platform used by millions of customers across the globe, spread across multiple time zones. You will play a crucial role in maintaining and improving the reliability, scalability, and performance of our systems and participate in the development and implementation of automation tools and processes to streamline operations and enhance system reliability. Job responsibilities will also include responding to incidents and troubleshooting issues faced by partners or end customers, implementing timely resolutions to minimize downtime and impact on users and contributing to the design and implementation of resilient application and deployment architectures for low latency, high availability, and disaster recovery.

Key skills/attributes

- Strong understanding of servers, computer architecture, networking and operating systems fundamentals.
- Expert level knowledge at the command line or sys-admin level with a Unix system like

Linux, MacOS, etc.

- Strong knowledge of database principles and performance optimization with experience in any one transactional database like MySQL or PostgreSQL
- Knowledge of scripting and automation languages (e.g. Python, Bash) is essential; it is helpful to be familiar with Java and Javascript.
- Some familiarity with cloud computing platforms such as Google Cloud Platform, Linode, AWS or Azure.
- Exposure to container architectures and tools like Docker, Docker Compose or Kubernetes.
- Familiarity with at least one monitoring and logging solution such as Zabbix, Prometheus, Grafana, ELK stack, etc is an added advantage.
- Understanding of CI/CD pipelines, DevOps and SRE principles.
- Excellent problem-solving skills and a proactive approach to troubleshooting and issue resolution.
- Strong communication and collaboration skills, with the ability to work effectively in a team environment.
- Eagerness to learn and a passion for technology and innovation.
- High level of personal responsibility and ability to deliver high quality work on time.

Deadline

We accept applications throughout the year.
