Title – Business/Data Analyst

Job Description:

- Working directly with clients and FJ team members on a day-to-day basis to identify business needs, frame a solution, seek the data to solve the problem and then present recommendations to drive change
- Building and maintaining client relationships by following high professional standards
- Identifying information sources, understanding database structures and data dictionaries to develop the optimal approach for data extraction, validation, and combination
- Conducting quantitative and qualitative analyses. This will include reviewing publications and interviewing appropriate industry experts. It may also involve developing predictive models under the supervision of a senior modeler
- Formulating definitive data driven recommendations and presenting them in a client ready presentation
- Data extraction, preparation, validation, and manipulation using statistical analysis tools such as Python, SAS, R and SQL may be required
