About
Haqdarshak

Simply put, we are bridging the information and access gap between citizens and social securityschemes (both government and private) using tech and a network of field agents known as 'Haqdarshaks' (who are primarily women).

Our 'Haqdarshaks' are extensively trained in both government schemes and the on-field implementation of programmes. They are also trained on how to liaise with government officials andbank officials. For the services they provide, they make a commission which makes them financially independent. On our social media channels, we have featured several stories of women who have not only gained financial agency but also an identity after working with us.

We partner with corporates, CSR departments, philanthropies, family offices, and even government offices to design and implement programs on the field. We have been around for almost **7 years**. We are present in more than **24 states**. We have unlocked benefits worth over **INR4,000 crore** for **over 27 lakh Indian citizens**. We have multiple digital portals (including two apps,one for citizens and one for our agents) where we have stored information on government schemes in **11 vernacular languages** (currently working on re skinning these apps).

Theseare set to forever alter how citizens access welfare services in India.

We are an independent organization and not affiliated with the government in any way.

Your Role

Key Responsibilities:

- Collaborate with cross-functional teams to design, develop, and deploy web and app solutions.
- Participate in all phases of the software development lifecycle, including requirements gathering, design, implementation, testing, and maintenance.
- Develop responsive and user-friendly interfaces using HTML/CSS and modern front-end frameworks such as React, React Native, Angular, or Vue JS.
- Design and implement robust back-end solutions using Node.js, PHP CodeIgniter/Laravel, or Python.
- Utilize database technologies including MySQL and PostgreSQL for efficient data storage and retrieval.
- Deploy and manage applications on cloud infrastructure, particularly AWS, leveraging serverless architecture and services like Lambda and SQS.

03/

Your Qualification and Skill

- Bachelor's degree in Computer Science, Engineering, or related field.
- 3-4 years of hands-on experience in software development.
- Proficiency in front-end technologies such as HTML, CSS, and JavaScript.
- Experience with PHP core development and familiarity with frameworks like CodeIgniter or Laravel.
- Familiarity with at least one of the modern JavaScript frameworks/libraries such as React, React Native, Angular, or Vue JS.
- Strong understanding of back-end development using Node.js, PHP, or Python.
- Solid grasp of database management systems, including MySQL and PostgreSQL.
- Experience deploying and managing applications on AWS cloud infrastructure.
- Knowledge of serverless architecture and related services such as AWS Lambda and SQS is a plus.
- Excellent problem-solving skills and ability to work in a fast-paced environment.
