Frequently Asked Questions

(Answered by Ashokans at Indus)

Q1: What does a day/week at Indus look like for you?
Ans 1: “The day begins between 10-12. The times vary for different people, depending upon their specific client’s time zone, project team preferences and personal commitments. My client is based i n the US, and the day starts at 10am. A typical day involves team discussions, working on client deliverables and chatting with colleagues. I typically work using software like SQL, Python, Excel, and Tableau. In the last 2 months that I've been here, I have worked on updating and analysing tableau dashboards, updating, and preparing SQL scripts from scratch, preparing analysis reports on Excel and web scraping using python. What I love about my day is that there is a good balance of self-governance and guidance. In a week, there would be approximately 2-4 connects with the client to present our deliverables & insights, seek feedback, and share progress updates. I work from home 2 days a week and from the office on 3 days. On Mon-Thurs, my day usually ends at 8 or 9pm. On Fridays, it usually ends at 6pm (unless there is a Happy Hour in the office).”

Q2: I don't know any coding. What technical knowledge is important to know before-hand?
Ans 2: “None. Everyone's journey at Indus starts with a 4 week-long structured training program. For someone like me who had never done any form of coding before joining Indus, working in an advanced analytics consulting firm seemed difficult. But the on-boarding period helped me ramp up on skills like SQL, Excel, R, Python, Tableau, PPT etc. The trainings are designed to be a mix of trainer-led and DIY sessions to provide a good blend of self-paced learning and an appropriate level of guidance. At the end of the training, it felt like we had grasped a semester equivalent course in just a month! Well, amazing trainers and peer group made that possible!! Post training, everyone gets staffed on various client projects. Then, there is a further 2-4 weeks of project-related knowledge transfer. This is done via material you can read through, pre-recorded videos, and sessions led by other team members. Overall, I love the mentoring-based culture here at Indus."

Q3: How is Indus different from other firms?
Ans 3: “From the work point of view, it would be solving great business problems with data. We bring in not just the business understanding but back that up with data for every recommendation we are making. For me, however, it would be the people I work with - they are fun, smart, kind and a helpful bunch! The average age being quite low, adds to the fun culture in office and makes interacting with colleagues even easier. Additionally, there is rapid growth and opportunity to be a part of initiatives like Indus Impacts (CSR), organising Indus Olympics, hiring, etc. depending on what appeals to each person."

Q4: What sort of clients are you working with? (3 responses)
Ans 4:

a. “I am working with a US-based Credit Card company. We interact with the client thrice a week. I started having client interactions from my 2nd week of being staffed on the project. It feels nice to be able to directly discuss our work with them and receive prompt thoughts on the deliverables we work on.”

b. "I got staffed under the business insights workstream of a US-based home improvement lending client. My team was very patient and hands-on with me. They helped me with in-depth understanding of both, the business, and data. They listened to all my ideas and appreciated my curiosity. For each doubt, I was asked to think and explore why would that be the case instead of directly giving me an answer. Overall, I love the critical thinking focused culture here at Indus."

c. "I work with a UK-based auto insurance client. I use data provided by the insurer to drive impact to their various policies. The highlight was my recent trip to London to work side-by-side with the client for 2 weeks. I was also able to take time off to travel a bit around the country."

Q5: What's the work culture like?

Ans 5: "At Indus, everyone is very open to new ideas and people are appreciated for taking initiative, irrespective of years of experience. Whenever I ask a doubt, rather than providing a direct answer, I am always asked why I think that could be happening, and then to explore multiple reasons for the same, and then given a hint to think further. There is a horizontal working structure and curiosity is encouraged! My typical working hours range around 9-10 hours per day. We have work-from-home on Tuesdays and Thursdays and there is a flexibility to take work-from-anywhere days. There are always fun conversations happening in and around the cafeteria. I love how people here care so much about life after work and thus bring life to work! Having a young team contributes a lot to an eased work culture because we're able to gel in quicker."

Q6: What do Insighters do for fun?

Ans 6: "From a company sponsored perspective, there are quarterly team outings (within your project team), plus every month, there are 1-2 lunches and a Happy Hours evening. For the quarterly outings, teams go for bowling, mystery rooms, go karting, pool, arcade games, etc. Lunches and Happy Hours are usually accompanied by promotion announcements, or event celebrations (Independence Day etc). Indus also organizes "Indus Olympics" every year - for which, all Insighters are divided into teams, which compete on outdoor sports like Football, Cricket, Basketball, Badminton as well as games like Antakshari, Chess, board games and e-sports like FIFA. I'm really excited for the Olympics this year! Outside of this, there are weekly football and cricket matches for which Insighters get together after work. Overall, it's a fun and chill culture where you are encouraged to take your work and your fun seriously! Come to our office & see for yourself – there is always a laugh being shared in the cafeteria!"
