Tech Manager

Remote

Full time

About NavGurukul:

NavGurukul is a not-for-profit founded in 2016 and is on a mission to create access to aspirational careers for students from marginalized communities. We are committed to working on profound transformation for our students so they can hold the same jobs and live the life of similar possibilities as people from the top of the pyramid assume. We imagine an equitable higher education alternative where students learn the right skills, mindsets, and the ability to learn on their own to thrive in the world.

What we do:

NavGurukul's flagship **Residential program** works with learners from underserved communities to help them become programmers and gives them a guaranteed job once they finish the program. Currently, we are training 1000+ students in our fully funded seven residential centers across various states in India. Eight of our nine campuses have only girl students. The focus on gender is a conscious choice, as inclusion is one of the core principles guiding our choices and focus areas.

The residential program is open for students who have finished just 10th grade and are 17 years of age. We are expanding our offering to digital careers other than programming, such as design and management.
So far, we have placed around 600+ students with software jobs in the tech industry with various IT giants and product startups. Our campuses are self-governed spaces that the students manage through elected student bodies. The learning on NavGurukul campuses is guided by **self-paced pedagogy** with a strong focus on **peer learning**.
Besides the Residential program, we have two more programs: Meraki and Code India Fellowship. Through Meraki, we work with students from government schools and ITIs through an online offering to help students learn basic English, touch typing, and programming. Code India Fellowship works with young freshers from India's top colleges to transform learning outcomes in government high schools and ITIs and ensure the employability of students graduating from these programs.

About the role:

As the Tech Manager for our Web Development Curriculum, you will be responsible for ensuring an effective learning journey for our students on our campuses. You will also be part of the team responsible for creating a curriculum that provides a solid foundation for students to become proficient web developers. You will also play a key role in skilling students for placement-related activities.

Roles and responsibilities:

- Learning Support
  - Work with Academic associates to develop teaching materials, presentation content, and exercises that align with the curriculum.
  - Encourage active participation and engagement among students by incorporating interactive activities, group projects, and practical assignments
  - Personally upskill the junior academic team members to ensure they are well-versed in delivering the curriculum effectively
- Curriculum Delivery
  - Deliver a structured and comprehensive curriculum that encompasses HTML, CSS, JavaScript, and ReactJS, with a focus on both fundamental concepts and the industry needs of an entry-level web development professional.
  - Develop a detailed course outline, including objectives, topics, and learning outcomes for each module, to ensure a logical and progressive learning path.
  - Create or select appropriate textbooks, online resources, and learning materials to aid the curriculum
- Tech Automation
  - Develop and implement automation solutions to streamline administrative and academic processes. evaluate existing systems and propose enhancements or replacements where necessary.
  - Oversee the development and maintenance of various tools to track and manage data. Ensure a user-friendly interface for the users of the tools. Generate reports and insights from data to inform strategic decisions.

Apply if you have:

- 3 -5 years of Industry or academic experience in Computer Science and Software Engineering
- Strong hands-on programming and application design experience with Javascript, HTML, CSS, and ReactJS / NodeJS
- Solid experience in data structures, algorithms, and design patterns
- Proven experience in curriculum development
- Knowledge of pedagogical principles, learning theories, and educational technologies
- Excellent communication, project management, and organizational skills
- Ability to adapt the curriculum to the needs and abilities of students
- Stay current with the latest developments in computer science and programming

Location:

This role would be remote, and you can work from anywhere. You will, however, be required to travel on a periodic basis to the campus to gain a deeper understanding of the residential program, which in turn enhances the quality of your inputs into the program. You can expect to travel around 20 - 40 per cent of your time to cover the above needs and this can be more or less in some months depending on the needs of the role at that time.

Compensation & Culture:

NavGurukul's salaries are at par with most not-for-profits in the country. For this role, the salary bracket is **5LPA to 8 LPA.** At NavGurukul, we only do work that we genuinely believe to be impactful and derive a lot of personal meaning and joy from it. We are also committed to creating an environment of work that is healthy, transparent, and joyful and enables growth and change, both personally and professionally. We have an open, ongoing, non-hierarchical dialogue to ensure the same, and you will be welcome to contribute to it when you are a part of the NavGurukul team.
We are an inclusive and diverse organization and encourage qualified individuals to apply, irrespective of their religion, caste, gender identity or expression, sexual orientation, ethnicity, age, or any other dimension of identity.
