Platform Engineer | Perpetuum

We are looking for a Platform Engineer with a strong foundation in coding, design, and architecture, and deployment and SRE skills. The ideal candidate will have experience in Node.js, TypeScript, and GCP, as well as fundamental skills in Python. Experience with AI and deep learning is a plus, but not required. The Backend Engineer will be responsible for developing and maintaining the backend platform, collaborating with cross-functional teams, and ensuring the reliability and scalability of the platform. The ideal candidate is a creative problem solver with a passion for learning and a strong attention to detail.

Key Responsibilities:

- Develop and maintain the backend platform using Node.js, TypeScript, and GCP
    - Design, implement, and deploy scalable and reliable backend services
    - Collaborate with cross-functional teams to ensure the backend platform meets business requirements
    - Write clean, maintainable, and testable code
- Collaborate with other teams to ensure the reliability and scalability of the platform
    - Familiarity with Site Reliability Engineering (SRE) practices
    - Experience with incident response and disaster recovery
- Manage migration and deployment complexity when switching between AWS and GCP
    - Experience with cloud migration and deployment strategies
    - Familiarity with cloud cost optimization techniques
    - Ability to manage and mitigate potential risks during migration
- Work with multi-model databases, specifically Arangodb, and understand Graph and NoSQL models
    - Experience with database design and optimization
    - Familiarity with data modelling, indexing, and query optimization
- Optimise the performance of backend APIs, reduce latency, and improve the throughput of microservice endpoints
    - Experience with performance optimization and load testing
    - Familiarity with RESTful API design and implementation
    - Understanding of microservice architecture and communication patterns

Nice to Have Skills:

- Code data pipelines using Python, Node.js, and NLP/Deep Learning models such as OpenAI, Mixtral, Claude2, TensorFlow, and GAN
    - Experience with data processing and transformation using Python and Node.js
    - Familiarity with Natural Language Processing (NLP) and Deep Learning models
    - Experience with TensorFlow and GAN for implementing AI/Deep Learning capabilities
- Implement cloud function-based async notification pipelines using technologies like Kafka or other event pipeline
    - Experience with event-driven architecture and message queues
    - Familiarity with Kafka or other event pipeline technologies
    - Ability to design and implement scalable and reliable async notification pipelines

Qualifications:

- Bachelor's degree in Computer Science, Engineering, or a related field
- Proven experience in Node.js, TypeScript, and GCP
    - Experience in developing and deploying Node.js applications in a production environment
    - Familiarity with GCP services such as Compute Engine, Cloud Storage, and Cloud Pub/Sub
    - Fundamental skills in Python
- Familiarity with AWS and the ability to manage migration and deployment complexity
    - Experience with AWS services such as EC2, S3, and Lambda
    - Familiarity with cloud cost optimization techniques
- Experience with multi-model databases, specifically Arangodb, and understanding of Graph and NoSQL models
    - Experience with database design and optimization
    - Familiarity with data modelling, indexing, and query optimization
- Strong understanding of backend API optimization and performance improvement
    - Experience with performance optimization and load testing
    - Familiarity with RESTful API design and implementation
- Understanding of microservice architecture and communication patterns
- Strong problem-solving skills, ability to work in a team, and excellent communication skills
- Familiarity with the practices of large tech companies such as Google, Amazon, and Microsoft
    - Experience with SRE, DevOps, and Agile methodologies
    - Familiarity with the culture and values of these companies

Why Join Us:

- Impact: Play a crucial role in shaping the growth trajectory of a groundbreaking product from the ground up.
- Innovation: Be part of a team that values creativity and innovation, always pushing the boundaries of what’s possible.
- Growth: Opportunity for professional growth and development in a dynamic and fast-paced environment.
- Culture: Join a supportive and inclusive team that celebrates individuality and empowers your voice.

How to Apply:

If you are passionate about driving growth and building products that make a real impact, we'd love to hear from you. Please send your resume and a cover letter detailing your relevant experience and why you’re excited about the opportunity to join Perpetuum and lead the growth of Spilll.

Join Perpetuum and help us make the internet a more engaging and inclusive place.
